

STRENGTHS

UI Programming: I was fully responsible for the entire UI system for five titles, built in both C++ and TypeScript, supporting both mouse/keyboard and gamepad controls.

Web Programming: I have over a decade of experience developing applications on the web, in Node.js, and using browsers embedded into games.

Tools and Build Systems: I've built Jenkins pipelines, and build scripts using Python in order to automate CI/CD for multiple titles, and improving workflows for developers and QA.

Project Management: I have taken on producer and PM roles when the need arises. I'm comfortable working with a team to build a schedule, and manage JIRA. My strong communication and writing skills help me bridge the gap between engineer speak and production. I've been interviewed on Noclip documentaries, written articles, and appeared on livestreams.

Generalist Programmer: I've jumped into unfamiliar codebases of old games to make fixes and enhancements to most systems, and have shipped games on PC, all consoles, and mobile.

EXPERIENCE

id Software - Senior Programmer

October 2010 - July 2026

Heretic + Hexen (2025)

Built on top of all the work done in DOOM + DOOM II.

Successfully reused UI, and improved experience throughout by adding a dynamic hint system to attach explanations for settings.

Steam reviews sit at Overwhelmingly Positive, improving on original Very Positive reviews, and currently at an 86 score on Metacritic.

DOOM + DOOM II (2024)

Wrote UI using Coherent Gameface HTML/JS middleware, using SolidJS.

Created reusable components for UI widgets, and a system to allow for gamepad navigation.

Implemented mod support in conjunction with the Bethesda.net team to allow UGC on console platforms.

Maintained Jenkins pipeline for building Xbox One, Xbox Series, PlayStation 4, PlayStation 5, Nintendo Switch, Steam, Windows Store, Epic Games Store, and GOG.

Steam reviews sit at Overwhelmingly Positive, improving slightly over original release's reviews.

Quake II (2023)

Successfully reused UI from Quake, building new features on top of an established, working, UI.

Maintained Jenkins pipeline for building Xbox One, Xbox Series, PlayStation 4, PlayStation 5, Nintendo Switch, Steam, Windows Store, Epic Games Store, and GOG.

Supported MachineGames designers creating new content with feature requests, fixes, and tools.

Released with an 89 score on Metacritic, the highest scoring game out of all Bethesda-published titles in 2023.

Quake (2021)

Wrote a reusable UI using Dear ImGui in C++ to emulate the original Quake UI.

Supported MachineGames designers creating new content with feature requests, fixes, and tools.

Maintained Jenkins pipeline for building Xbox One, Xbox Series, PlayStation 4, PlayStation 5, Nintendo Switch, Steam, Windows Store, Epic Games Store, and GOG.

Steam reviews sit at Overwhelmingly Positive, a couple of percentage points higher than before.

DOOM Classic (2019)

Responded quickly to fan criticisms of initial release, and turned sentiment from negative frustration to something fans would recommend to players.

Used my deep knowledge of the game to fix many longstanding issues with previous official ports, and addressed the biggest community criticisms.

Helped find, and contract prominent community members to help improve our version of the DOOM engine, and license community mod content.

Maintained product and added new features in the Unity Engine based shell.

RAGE 2 (2019)

Built small web application to manage in-game store content to automate previous workflow of making hundreds of manual HTTP requests, for each language, and each platform.

Quake Champions (2015)

Contributed to design, and programmed prototype of original gameplay concept.

Built stats website to allow players to track stats, and compare to their friends.

Built a 3D heat map website to view gameplay data in 3D in the browser.

Worked with project management to generate BI and gameplay data reports based on collected telemetry data.

DOOM 4 (Unreleased, 2012)

Contributed to internal metrics tracking for multiplayer matches, including match events, heat map, and stats.

Quake Live (2009)

Rewrote the entire UI for the Steam exclusive version using an early version of React.

Moved the game from a live service with persistent infrastructure to fully running under Steamworks.

Was responsible for all elements of the backend, including the PHP frontend, Python backend, PostgreSQL, and Cassandra.

EDUCATION

Rochester Institute of Technology: February 2010

Graduated with a Bachelors of Science in Graphic Media from the School of Print Media.
